Reproducibility

Reproducibility :: Why is it important?

2017-07-03

Reproducibility

└ Why do we need
Reproducibility

└ **Reproducibility :: Why is it important?**

Reproducibility - Why is it important?

1. Because it affects everyone.
2. Supporting pillar of the empirical sciences
3. All scientific results should be reproducible in order to confirm the experiment and the resulting knowledge and to build upon them.
4. 47 out of 53 paper about cancer aren't reproducible ([Beg12])
 - 4.1 Medical treatment is based on research!
5. Not always possible to validate results from other researchers because of some of the experiments require a huge effort, e.g. LHC (Higgs particle, etc...) or stochastic processes

Reproducibility :: Why is it important?

What is Reproducible Research?

2017-07-03

Reproducibility

└─ What is
Reproducible Research?

What is
Reproducible Research?

“Reproducibility is the ability of an entire analysis of an experiment or study to be duplicated, either by the same researcher or by someone else working independently, whereas reproducing an experiment is called replicating it.”
— Wikipedia Reproducibility

<https://en.wikipedia.org/wiki/Reproducibility>, lastvisit: 05.05.2017

“Reproducibility is the ability of an entire analysis of an experiment or study to be duplicated, either by the same researcher or by someone else working independently, whereas reproducing an experiment is called replicating it.”
— Wikipedia Reproducibility

<https://en.wikipedia.org/wiki/Reproducibility>, lastvisit:25.05.2017

Reproducibility is the ability of an entire analysis of an experiment or study to be duplicated, either by the same researcher or by someone else working independently, whereas reproducing an experiment is called replicating it.

- Reproducibility verifies that an observation can be made repeatedly
- Reproducibility doesn't imply that the conclusions of a study is correct
- Reproducibility and replicability Often used interchangeably

Reproducibility

└─ What is
Reproducible Research?└─ **Reproducibility** :: A Definition

2017-07-03

Reproducibility :: A Definition

Reproducibility \neq Replicability

[Dru09]

1. Reproducibility:
 - 1.1 As defined in [Dru09]
 - 1.2 Outgoing from the data it is possible to get the same results as the original publisher, without using the same method
 - 1.3 Not restricted to using the same tools and instruments to measure the data
2. Replicability:
 - 2.1 As defined in [Dru09]
 - 2.2 Rebuild the exact project with its flaws
 - 2.3 Aims for the exact same data as the original work (even for wrong data)
 - 2.4 Leads to problems if the measuring was wrong or instruments where not calibrated correctly

Reproducibility

Reproducibility
in Empirical Science by Example

Reproducibility in Empirical Science by Example

Reproducibility
in Empirical Science by Example

Reproducibility :: Empirical Science

2017-07-03

- Focus on gathering data
- Events aren't often deterministic
- High probability of measuring random data
- Empirical Sciences depends often on statistical methods.
 - No exact solution possible
- Sometimes no second setup exist (e.g. Hubble)
- ATLAS / CMS:
 - Higgs detection
 - Huge range of particle detectors
 - Expensive to run 1.3TWh/a \approx 60million euro
 - https://www.lhc-closer.es/taking_a_closer_look_at_lhc/0.energy_consumption
 - <https://home.cern/about/engineering/powering-cern>
 - Same for HPC (DKRZ \approx 1.4MW/a = 12.3GWh/a (Mistral))

2017-07-03

Reproducibility

└─ Reproducibility
in Empirical Science by Example

└─ **Reproducibility :: Empirical Science**

- Events are happening every 25ns or 40 million times per second
- Prefiltering of events necessary to store the data onto disk
problematic for reproducibility

How did they make the Higgs experiment reproducible?

https://smolinacalvo.files.wordpress.com/2012/02/higgs_limits_simplified_5b.jpg

Reproducibility

└─ Reproducibility

in Empirical Science by Example

└─ **Reproducibility :: Empirical Science**

2017-07-03

Reproducibility :: Empirical Science

How did they make the Higgs experiment reproducible?

- $7\sigma \hat{=} 10^{-10}\%$ of a random measured result
(<https://phys.org/news/2012-12-cms-atlas-higgs-like-particle-sigma.html>)
- Through measuring the significance
- Small mistakes can make such a experiment irreproducible like Faster than Light Neutrinos
(https://en.wikipedia.org/wiki/Faster-than-light_neutrino_anomaly#Measurement_errors)
 - A loose link from a GPS receiver which increased the delay through the fiber
 - A clock on an electronic board ticked faster than its expected 10 MHz frequency
- Cheating makes it irreproducible!
 - Creative data (adaption or invention of datasets)

How did they make the Higgs experiment reproducible?

ICON-Model

Reproducibility

└─ Reproducibility
in Simulations

└─ **Reproducibility :: Simulations**

2017-07-03

- Used for worldwide weather forecasting / climate prediction
- Support nested grids for finer detail.
- Constructed through a icosahedral grid
 - Avoid polar singularities
 - Calculates on a finer mesh than the previous model
 - Higher surface (75km)
 - Low-level airflow
 - Rivers
 - Islands

- 2,949,120 Triangles
- 173km^2 on average per triangle
- Total of 265 million grid points
 - Prognostic variables are located in the circumcenter
 - Wind directions at the midpoint of the edges
 - Smaller models at specific areas (e.g. COSMO-EU, COSMO-DE)
 - Got replaced at 30.11.2016 by ICON-NEST [Hel16]
- 900 GB of data for a 7-day forecast

[DWD0j]

Reproducibility

- 173km^2 on average per triangle
- Total of 265 million grid points
 - Prognostic variables are located in the circumcenter
 - Wind directions at the midpoint of the edges
 - Smaller models at specific areas (e.g. COSMO-EU, COSMO-DE)
 - Got replaced at 30.11.2016 by ICON-NEST [Hel16]
- 900 GB of data for a 7-day forecast

[DWD0j]

- A about a quarter the size of Hamburg $\frac{755.22\text{km}^2}{173\text{km}^2} \approx 4.37$
- Replacement happened because the new ICON model supports nested areas with a smaller resolution.
- Also expensive to run
- Not available for everyone (hard to check reproducibility)

Is it not equal to an
empirical experiment?

- Additional layer of uncertainty
- Additionally, need to deal with:
 - Float-point errors
 - Nondeterministic (partial-) results
 - Errors from input data
 - Hardware effects
 - E.g. ECC or Processor errors (Ryzen FMA3 or the Pentium-FDIV-Bug)
 - Unknown internals of the Hardware

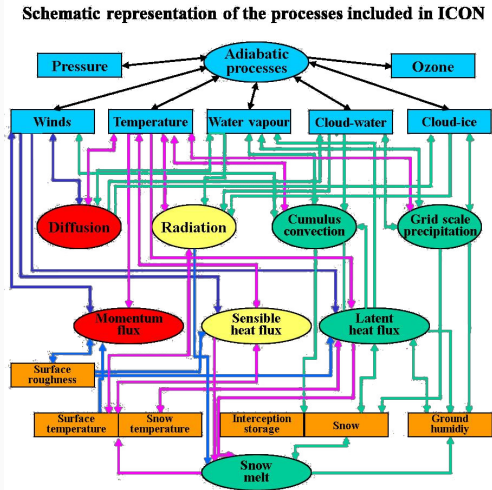

Is it not equal to an
empirical experiment?

Not Quite!

Is it not equal to an
empirical experiment?

Not Quite!

- Additional layer of uncertainty
- Additionally, need to deal with:
 - Float-point errors
 - Nondeterministic (partial-) results
 - Errors from input data
 - Hardware effects
 - E.g. ECC or Processor errors (Ryzen FMA3 or the Pentium-FDIV-Bug)
 - Unknown internals of the Hardware

Reproducibility

└─ Reproducibility
in Simulations

└─ **Reproducibility :: Simulations**

2017-07-03

- No possibility to change real world variables (only observation)
 - Hard to predict what went wrong
 - Hard to test reproducibility and perform general tests
- Huge amount of interactions between the subsystems
- Multiple scalar / vector values on each cell

- Bit-Reproducibility

- Run multiple times should result in bitwise identical results
- ICON uses Cray compiler to achieve this
- Useful for debugging
 - Check MPI/OpenMP
 - Checking correctness of new code (testing)

[Rei15]

2017-07-03

Reproducibility

└─ Reproducibility

└─ **Reproducibility :: Simulations**

- Bit-Reproducibility
 - Run multiple times should result in bitwise identical results
 - ICON uses Cray compiler to achieve this
 - Useful for debugging
 - Check MPI/OpenMP
 - Checking correctness of new code (testing)

[Rei15]

- Bit-Reproducibility results often in performance loss
- OpenMP checking is done by running the configuration multiple times and check if the results are bitwise identical (hint for OpenMP race condition) ([Rei15])
- MPI checking is done by changing the processor configuration and check if the results are bitwise identical (hint for MPI parallelization bug) ([Rei15])

Reproducibility :: Why is it so hard?

- Floating-point operations on one processor are deterministic
 - But this is not the case in multiprocessor applications.
- Writing an algorithm differently can lead to other results
 - Closed source can make this worse
 - Rewriting a formula is also nondeterministic

$$a \cdot (b + c) \neq a \cdot b + a \cdot c$$

[Die12]

 - May produce different results for different compiler (-versions).
 - Unexpected behavior
 - Different speed / memory usage
 - Wrong linked libraries
 - Compilers are also just software (Bugs)

[Lun15], <https://reproducible-builds.org/>

- Even for the same compiler the output might not be the same

- ASLR = address space layout randomization, randomly arrange address space positions (like stack, heap, libraries)

https://en.wikipedia.org/wiki/Address_space_layout_randomization

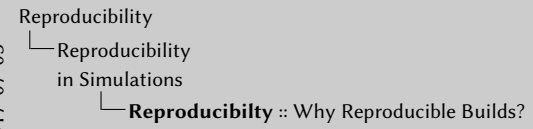

- -fbranch-probabilities guess the branching based on a random probability, only on old gcc versions

<https://gcc.gnu.org/onlinedocs/gcc-3.3.1/gcc/Optimize-Options.html>

- Compilers are software
- Bugs in the compiler
- Some compilers insert time stamps
- Other machine was used to compile
- Can result in different run-time or memory usage

└─ **Reproducibility** :: Best Practices

- What should be included ([Sto14] based on [Cec03]):

- Definition by Stodden et al. based on the definition for the Committee on Responsibilities of Authorship in the Biological Sciences
- Data:
 - If you got data from a different source or measured by your self it might be different and can include measuring errors
 - This also means that the author of the original paper needs to describe how the data was measured, to ensure reproducibility
- Algorithms:
 - Exact description of the algorithms are necessary to know what the algorithm should return for specific inputs
 - E.g: Stable vs. unstable sorting
- Others:
 - Which instruments where used and how where they calibrated
 - All parameters of a program should be listed.

- What should be included ([Sto14] based on [Cec03]):
 - Data
 - Should be available for free and without any restrictions for research purposes

Reproducibility

Best Practices

Reproducibility :: Best Practices for Data

2017-07-03

- What are the best practices to achieve reproducibility for data:
 - Citation of 3rd party data
 - Data
 - Redundant
 - Provide uncleaned raw data
 - Version controlled (depends on data size)
 - Provide a solid infrastructure, especially for big data sets

[Cec03], [Sto14]

- What are the best practices to achieve reproducibility for data:
 - Citation of 3rd party data
 - Data
 - Redundant
 - Provide uncleaned raw data
 - Version controlled (depends on data size)
 - Provide a solid infrastructure, especially for big data sets

[Cec03], [Sto14]

- Definition by Stodden et al.
- Data should be accessible to future researchers
- Uncleaned data should be used to avoid replicability
- Version controlled to avoid cheating but also to keep it apart from similar datasets.
- Should be freely available!

Reproducibility :: Best Practices for Source Code

Reproducibility

└ Best Practices

└ **Reproducibility :: Best Practices for Source Code**

2017-07-03

- What are the best practices to achieve reproducibility for code:
 - Citation of 3rd party code
 - Code
 - Redundant
 - Documented
 - Version controlled
 - Ideally with examples and tests

[Cec03], [Sto14]

- What are the best practices to achieve reproducibility for code:
 - Citation of 3rd party code
 - Code
 - Redundant
 - Documented
 - Version controlled
 - Ideally with examples and tests

[Cec03], [Sto14]

- Definition by Stodden et al.
- Data should be accessible to future researchers
- Documented (not in [Sto14]) To make sure that the program code does what it is supposed to and to help others to understand the code.
- Version controlled help seeing the progress of the researchers. Allow simple modification with the benefit to republish the code for others.
- Best case: Open Source!

Reproducibility :: How To Deal With Irreproducibility?

- Provide insight to your code / data
 - Helps other researchers
 - Helps users without a computer science background
 - Users may think is a bug
 - Can help in a review process

[Die12]

2017-07-03

Reproducibility :: Summary

Reproducibility

└ Best Practices

└ **Reproducibility :: Summary**

2017-07-03

- Reproducibility ≠ Replicability
- Software introduces a layer of uncertainty
- Not always possible to achieve reproducibility
- Open data / source help others
- Reproducibility may be costly

- Reproducibility \neq Replicability
- Software introduces a layer of uncertainty
- Not always possible to achieve reproducibility
- Open data / source help others
- Reproducibility may be costly
